

Science.
Applied to Life.™

A man with white hair, wearing a grey protective suit, is kneeling on a grey surface. He is applying a blue masking tape to the edge of a dark grey car body panel. The panel has a circular hole and a larger, irregularly shaped hole. The background is a dark, industrial setting. A large yellow and orange diagonal graphic is overlaid on the bottom left of the image.

**Protect your body.
Prepare to paint.**

3M Masking Solutions Products

3M™ Masking Solutions.

Masking tape is used in all types of applications throughout the repair process. 3M offers a range of products to help increase productivity and improve profitability, by reducing repair process times and eliminating rework costs.

3M is one of the world's largest manufacturers of tapes. Through intensive research and development in laboratories throughout the world, we have created a range of new and innovative products that provide fast and effective solutions for every masking situation. From fine line painting and detailing to general protection, 3M masking systems are able to meet all demands.

Aperture masking for smooth blend lines.

3M Soft Edge Masking Foam Tape

An effective solution for time-consuming masking of vehicles prior to painting. The tape is used to mask vehicle apertures such as door, bonnet, boot and filler cap. As well as achieving the required 'soft edge', this tape ensures that the interior of the vehicle is kept free of paint and dust.

3M Soft Edge Masking Foam Tape.

3M Soft Edge Masking Foam Tape PLUS

utilises a tubular design that will deform to expand or compress to fill a range of aperture sizes. This allows painters to easily mask both wide and narrow openings in one simple step, whilst the offset adhesive bead allows the product to be placed away from the paint edge to optimise the soft edge.

3M Soft Edge Masking Foam Tape PLUS.

Accurately masking difficult contours and areas.

3M Trim Masking Tape eliminates visible paint edges and reduces the cost of removing and installing new mouldings and glass. It allows paint coverage under the moulding, saving time and labour on removing paint lines on existing mouldings.

3M Trim Masking Tape.

3M Trim Lifting Cord eases the problems when painting up to a rubber moulding such as around a windscreen. A flexible 6mm diameter foam cord is slid under the moulding using a clever applicator tool. Quick to apply, the cord ensures no edge build-up and no visible evidence of repair work, thus eliminating the need to remove the glass. An applicator tool is supplied free with each box.

3M Trim Lifting Cord.

3M Smooth Transition Tape is a fast and simple way to create smooth transitions whilst painting base and clear coat finishes. Our tape provides a flawless appearance when masking and painting parts such as door apertures, quarter edge panels and swage lines. It can be used in conjunction with 3M Soft Edge Foam Masking Tape PLUS for primer repairs so it is great for SMART repairs.

3M Smooth Transition Tape.

Premium range prevents rework and saves money on time and materials.

3M Purple Premium PLUS Clear Masking Film prevents moisture imprinting and ghosting on painted vehicle surfaces. The film is a premium high density plastic sheeting which withstands temperatures of up to 120°C for an hour. Masking tape can easily be removed and repositioned on the film.

3M Purple Premium PLUS Clear Masking Film.

3M Taped Masking Film is used for localised masking and SMART repairs. Our pre-applied tape makes this film easy to use, and our micro replication technology means that you can tear in clean, straight lines without a blade. It protects against paint spray and prevents paint running off the plastic film.

3M Taped Masking Film.

3M Scotch® High Performance Masking Tape (Blue) 3434 is suitable for a wide variety of applications in auto refinishing. Use in environments up to 110°C and in conditions of high water resistance. Our high performance blue crepe paper masking tape has excellent solvent and water resistance properties.

3M Scotch® Premium Auto Refinish Masking Tape (Green) 3030 gives you clean paint lines and less build-up. Our green-coloured, smooth creped masking tape is a specially formulated cross-linked rubber/resin adhesive and suits a wide variety of bodyshop applications.
